library(haven)
library(forcats)
library(psych)
```

```
# Load data
data <- read_delim("raw_data.csv")
```

```
#####
##### STEP 1: Table 1 #####
#####
```

```
table(data$QUANT_VAR1)
mean(data$QUANT_VAR1)
sd(data$QUANT_VAR1)
summary(data$QUANT_VAR1)
describe(data$QUANT_VAR1)
```

```
table(data$QUANT_VAR2)
mean(data$QUANT_VAR2)
sd(data$QUANT_VAR2)
summary(data$QUANT_VAR2)
describe(data$QUANT_VAR2)
```

```
table(data$QUAL_VAR1)
mean(data$QUAL_VAR1)
sd(data$QUAL_VAR1)
summary(data$QUAL_VAR1)
describe(data$QUAL_VAR1)
```

```
table(data$QUAL_VAR2)
mean(data$QUAL_VAR2)
sd(data$QUAL_VAR2)
summary(data$QUAL_VAR2)
describe(data$QUAL_VAR2)
```

```
#####
##### STEP 2: Table 2 #####
#####
table(data$QUAL_VAR1,data$QUAL_VAR2)
```

```
#####
##### STEP 3: Chi squared test #####
#####
chisq.test(table(data$QUAL_VAR1,data$QUAL_VAR2))
```

```
#####
##### STEP 4: ANOVA #####
#####
# Perform ANOVA
anova_adapted <- aov(QUAL_VAR1 ~ QUANT_VAR2, data = raw_data)
# Summarize ANOVA results
summary(anova_adapted)
# total SS; TSS
5+0.1
# get R2
# between/total
# OR between/(between+within)
0.1/(0.1+5)
#####
##### STEP 5: Correlation #####
#####
cor(data$QUAL_VAR1, data$QUANT_VAR2)

#####
##### STEP 6: Linear Regression #####
#####
lm(data$QUANT_VAR2 ~ data$QUAL_VAR1, data = raw_data)
summary(linear_relationship)
#####
##### STEP 7: Figure 1 #####
#####
linear_plot <- plot(raw_data$QUAL_VAR1, raw_data$QUANT_VAR3)
print(linear_plot)
linear_relationship <- lm(QUAL_VAR1 ~ QUANT_VAR3, data = raw_data)
summary(linear_relationship)
abline(linear_relationship, col = "red")
abline(h=mean(raw_data$QUAL_VAR1))
abline(v=mean(raw_data$QUANT_VAR3))
#####
##### STEP 8: Examine residuals #####
#####
plot(raw_data$QUAL_VAR2, residuals(linear_relationship))
abline(v=mean(raw_data$QUAL_VAR1))
```
